

THE EARTH DAY

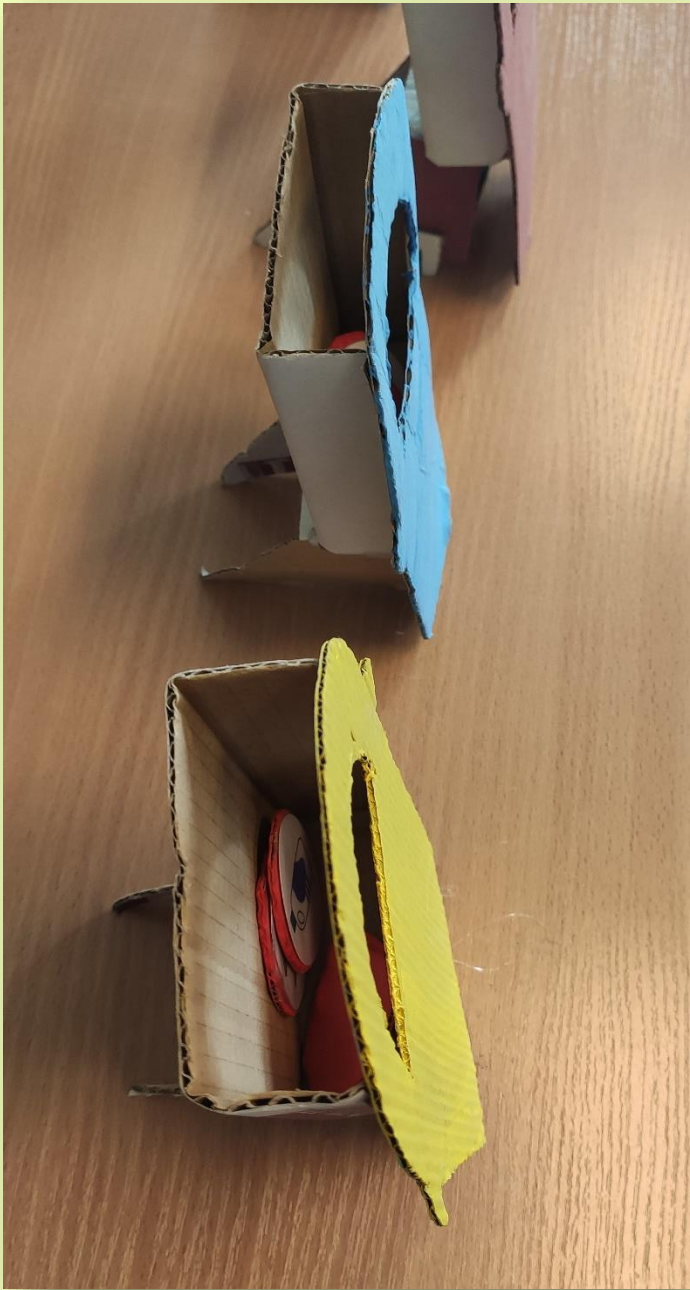

Publiczna Szkoła Podstawowa nr 15 w Opolu

The Earth Day 2022

Students took part in the workshops concerning ecology, saving the environment and waste segregation. The Municipal Centre for Educational Support in Opole initiated the workshops in collaboration with us.

The Earth Day 2023

The Climate Summit

We celebrated the the Earth Day with students and teachers with partner countries. Polish students prepared the performance about the condition of our planet. Students acted as TV presenters, the television studio connected live with various locations, such as in front of a factory or at a March for the Earth. This allowed viewers to witness firsthand the impact of human activity on the environment. The performance was not only a showcase of the students' artistic talents but also a valuable lesson in ecology. By taking on various roles, the students convincingly portrayed the complexity of environmental issues and the need for sustainable development.

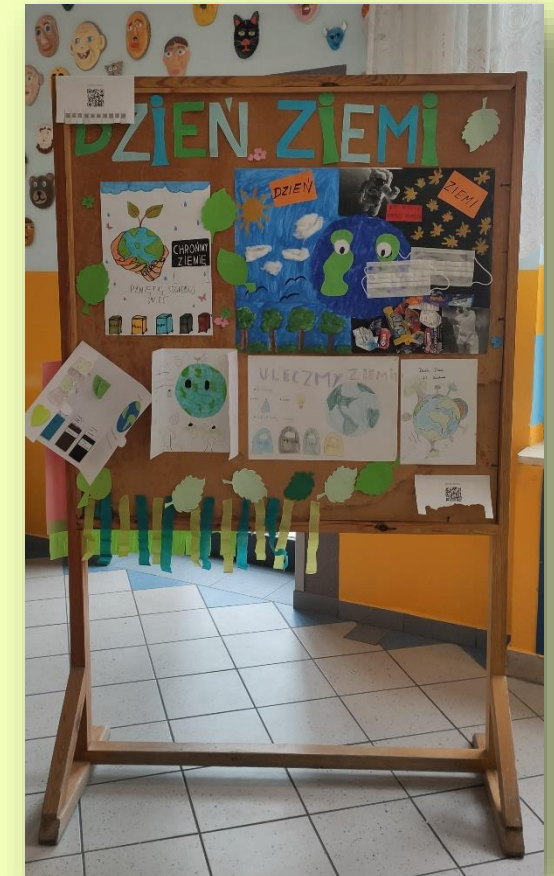

Students participated in the following eco-art workshops at our school: 'Little Slav' - students from Spain, Greece, and Poland decorated eco-friendly bags with Slavic motifs using natural dyes; 'Porcelain Painting' - a workshop led by an expert from the Opole Cepelia, where students from Slovenia and Poland painted Opole plant motifs on porcelain saucers; 'Glass Painting' - a workshop for students from Italy and Poland prepared by experts from the Museum of Opole Silesia. Students from Finland and Poland participated in the 'Lab of Life' chemistry workshop.

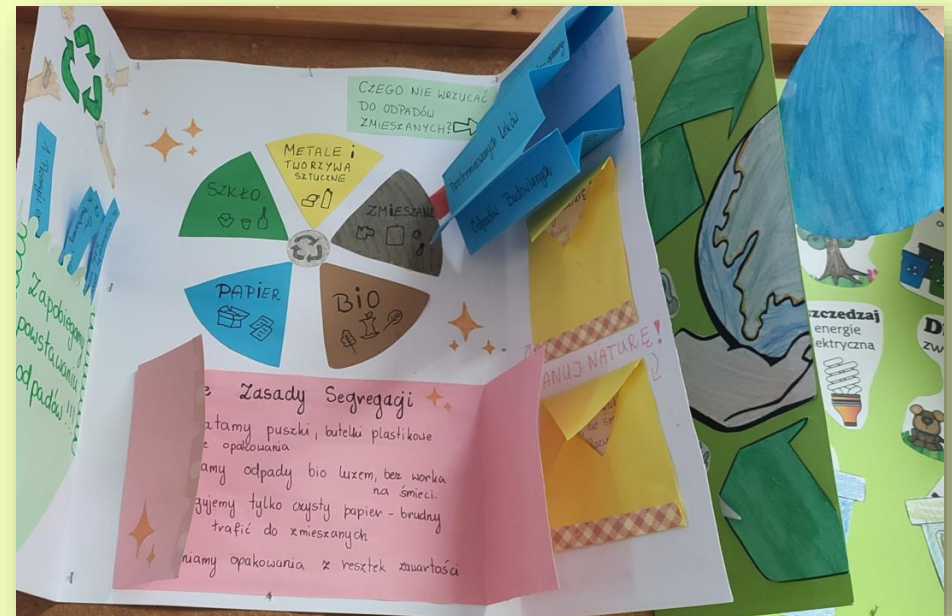

The Earth Day 2024

To celebrate the Earth Day our school was involved in the environmental education for a week. We held workshops concerning recycling, went on field trips, and created posters and lapbooks on waste segregation. We invited guests from the Municipal Center for Educational Support in Opole - the Fly Away Waste Workshop. We also learned how to make paper and upcycled clothes into eco-bags. We even set up class Reuse Centers to exchange items. We were truly Eco-minded.
